Tangerang Selatan, Indonesia

SUMMARY

Fresh graduate in Informatics with a strong focus on full-stack development and AI-powered systems. Experienced in building scalable web applications, designing backend services, and integrating Large Language Models into practical workflows. Currently working on AI workflow development, including AI agent skills, tool integrations, staging environment configuration, and production-oriented infrastructure for high-volume applications. Passionate about creating reliable, automation-driven solutions that connect modern web systems with intelligent AI capabilities.

EDUCATION

Universitas Pembangunan Nasional "Veteran" Jakarta
Informatics, Faculty of Computer Science | GPA: **3.87**

Jakarta, Indonesia
2022 - 2025

WORK EXPERIENCE

Neuram
AI Engineer

Jakarta, Indonesia
03/2026 - Present

Neuram is an AI solutions company focused on building intelligent automation systems, AI agents, and scalable production-ready AI workflows for enterprise clients.

- Built and configured AI agent workflows, including tool integrations, agent skills, and automated task execution pipelines to support real-world client operations.
- Configured and maintained staging environments across frontend, backend, AI services, and third-party integrations, ensuring production-ready reliability for high-volume user traffic.

Kuasar
Backend & AI Engineer Intern

Jakarta, Indonesia
05/2025 - 08/2025

Kuasar is a technology solutions company that helps various clients develop intelligent applications powered by AI and modern backend systems.

- Built an AI-powered underwriting platform integrating LLM-based chatbot services using LangGraph and RAG pipelines.
- Designed and implemented scalable REST APIs using FastAPI and PostgreSQL, supporting production workloads.

ORGANIZATIONAL EXPERIENCE

Badan Eksekutif Mahasiswa Fakultas Ilmu Komputer UPN "Veteran" Jakarta
Vice Chairman

Jakarta, Indonesia
01/2024 - 12/2024

The Student Executive Board of the Faculty of Computer Science is the highest faculty-level student organization responsible for coordinating student activities.

- Coordinated successful executions of 43 work programs of BEMF-IK, attracting participants from various universities.

FIK FAIR 2024
Project Officer

Jakarta, Indonesia
8/2024 - 11/2024

FIK FAIR is an annual event organized by the Faculty of Computer Science at UPN 'Veteran' Jakarta, featuring seminars, social events, and national-level competitions in both academic and non-academic categories.

- Successfully led 13 events and competitions, meeting all key performance indicators, including participant engagement, budget management, and event outcomes, achieving national-level involvement.

ACHIEVEMENTS

Best Presenter Seminar Ilmiah Nasional Mahasiswa Ilmu Komputer dan Aplikasinya (SENAMIKA)
Recognized for delivering an outstanding presentation on a research paper at this national-level seminar.

2024

Best Paper Seminar Ilmiah Nasional Mahasiswa Ilmu Komputer dan Aplikasinya (SENAMIKA)
Awarded for presenting a well-researched and impactful paper on a cutting-edge topic in computer science, demonstrating exceptional analytical and academic skills.

2024

CERTIFICATIONS

Data Science & Generative AI Issued by PT Mitra Talenta Group (Celerates School)	07/2025
IT Specialist - Data Analytics Issued by Certiport, Pearson VUE	12/2024
Junior / Associate Data Scientist Issued by LSP UPNVJ	07/2025

SKILLS

- Programming:**
Python, JavaScript, Typescript, Java, C#, Go
- Frameworks:**
React, FastAPI, Flask, Express, Chi
- AI / ML:**
TensorFlow, Scikit-learn, RAG, LLMs
- Databases:**
PostgreSQL, MySQL, MongoDB
- Tools:**
Git, Docker, Google Cloud Platform, Hugging Face, OpenRouter

PROJECTS

- Thesis: Web-Based Criminal Law Consultation System Using RAG and LLM**
Designed and developed a web-based criminal law consultation system leveraging Retrieval-Augmented Generation and Large Language Models to deliver contextual, accurate, and domain-specific legal responses.
- Implemented vector-based semantic retrieval over curated criminal law documents, achieving Answer Relevancy: 0.801 and Context Precision: 1.00 based on RAGAS evaluation, indicating highly relevant and well-grounded responses.
 - Built the system using a modern full-stack architecture with FastAPI for the backend and React with TypeScript for the frontend, focusing on scalability, reliability, and real-world applicability for legal information access.
- Phishing Detection Chrome Extension**
Developed a Chrome extension with a Flask backend and React frontend, utilizing an XGBoost machine learning model to detect phishing by analyzing URLs through feature extraction.
- Achieved 85% accuracy in detecting phishing websites during testing, significantly enhancing user safety and security while browsing.
- Comparison of SVM and KNN for Flood Prediction**
Machine learning project using Support Vector Machine (SVM) and K-Nearest Neighbor (KNN) algorithms, evaluated through Stratified K-Fold Cross Validation, to predict rainfall rates and assess flood risks in Jakarta.
- SVM achieved an accuracy of 90.19%, while KNN achieved 88.32%, providing insights into effective algorithmic approaches for flood prediction and mitigation.
 - Presented at the 2024 Seminar Nasional Mahasiswa Bidang Ilmu Komputer dan Aplikasinya (SENAMIKA), contributing to research on urban flood prevention strategies.
- Raga-Bot: Virtual Fitness Assistant**
Developed a rule-based chatbot using NLP and a Neural Network model to provide fitness recommendations and motivational support.
- Achieved 100% accuracy in intent recognition, offering tailored workout plans with adjustable difficulty.
 - Built a React-based website with Flask and MySQL for seamless user interaction and data management.
- HeimOps: Real-Time Monitoring & Incident Management Platform**
Built a full-stack observability platform for real-time service monitoring, alert evaluation, and incident lifecycle management using Go, React, and PostgreSQL..
- Engineered a rule-based alert engine with configurable thresholds, evaluation windows, cooldown logic, and SSE-powered real-time dashboards.
 - Developed a containerized telemetry ingestion pipeline and clean layered backend architecture, deployed via Docker Compose.
